

Customer Ledger Report

Scope Of Work

Customer Ledger Report

Develop a standalone **Customer Ledger** report using **Visual Basic (VB)** with **Crystal Reports** integration. The report will primarily establish a secure connection to the company's sample **Microsoft SQL Server** database to retrieve customer ledger information and generate the required **Customer Ledger Crystal Report (rpt)**. The report must accurately match the approved report specimen in terms of layout, formatting, and output. It must operate correctly alongside the **Sage ERP 2022** and must not conflict with shared DLLs, COM components, or report engine files.

The report will provide functionality to:

- Connect to the SQL Server database.
- Retrieve customer ledger data based on user-defined parameters.
- Display the Crystal Report within the application.
- Print and export the report as required.

After completing the report development and user interface (**Customer_Ledger.exe**), the application will be deployed to the **Quality Control (QC)** environment for comprehensive testing and **User Acceptance Testing (UAT)**. Upon successful completion of UAT and formal approval, the application will be deployed to the company's production server in coordination with the **Server Administrator**.

Server Environment

Report Name	Customer Ledger Report Viewer (customer_ledger.exe)
Server Platform	Windows Server 2019 Standard (64-bit Operating System)
Report UI Platform	Microsoft Visual Basic 6.0 (VB6), Version 6.0(32 bit)
Database	Microsoft SQL Server
SQL Server Management Studio	19.3
SQL Server Version	SQL Server 2019 (15.x)
Authentication Mode	SQL Server Authentication
ERP System	Sage ERP 300 Advanced (Version 2022)
Sage ERP Database	BNBDAT
